

Freedom to process outside the box

Innovation is freedom.

Leverage the power of universal control: Enhance your process performance with the wider dynamic range and better accuracy of Finesse SmartParts. Click your mouse to optimize process control using our TruBio software. Network multiple bioreactors to perform comprehensive design-of-experiment studies with intuitive data analysis tools. Run your process like never before.

Free up both bench space and budget: G3Lab Universal controllers are compatible with most commercial bioreactors under 50L, from reusable glass vessels to single-use shakers, rockers or stirred-tank containers. Vessel selection is simple with a wide array of vessel adapters, modular gas manifolds, and easy integration of 3rd party peripherals. Focus on cells and titers rather than bioreactor volume, brand or type.
